

26 May 2010

**Eruma plc ('Eruma' or 'the Company')**  
**Contract Wins Totalling circa. £85,000**

Eruma plc, the AIM traded specialist provider of counter terrorism, intruder prevention products and intelligent lighting, is pleased to announce that it has won a number of contracts through its wholly owned subsidiary, Security Blinds Ltd ('Security Blinds'), totalling £85,000. Security Blinds has two key products, the Secur™ range of security blinds and the Anti Ram Raid Gate, offering high quality intruder and counter terrorism protection solutions to clients operating in both the public and commercial sectors.

Eruma has been awarded a contract to install Secur™ security blinds at a high protection facility for a new blue-chip financial services client in northern Europe. The contract is worth £47,400 and provides the Company with its first contract of this kind in northern Europe outside of the UK. This win follows a concerted campaign in the European security sector to demonstrate the quality of Eruma's products in counteracting threats from terrorism and intruders. It is the first of its kind in the region further to a referral based on the Company's reputation in the financial services sector.

Additionally, Eruma has been selected by a client operating in the construction industry to install its Anti Ram Raid gate at nine separate industrial units containing highly valuable goods across the UK. The total contract value for this single client throughout 2010 so far has been £35,500 and with over 300 units throughout the UK, this has the potential to be extended. Furthermore, there are a vast number of companies in the UK which use industrial unit facilities, some of which store assets which can be difficult to insure, thus creating a significant market for the Anti Ram Raid Gate. The Anti Ram Raid Gate, which can be rapidly deployed, provides customers with a reduced risk of thefts as well as reducing damage inflicted on the storage unit itself.

Eruma Chief Executive Wayne Money said, "Our technology is proven to provide critical facility protection and is suitable for corporations operating across a range of sectors. With this in mind, we have seen an escalation in sales both through new business wins and repeat orders for Security Blinds' products. Importantly, our products are simple to deploy, making our offering more attractive for customers looking to increase security across a number of locations in a short amount of time which, combined with our focus on developing client relationships, has led to multiple client contracts."

## Notes

Incorporated in March 2005 and listed on AIM, Eruma plc is the holding company for Illuminex Ltd and Security Blinds Ltd.

**Security Blinds Ltd** is a leading manufacturer of physical security and protection systems in the UK. Servicing both the public and commercial sectors, the patented Secur™ system provides clients with protection against theft and forced entry. The system also gives businesses and institutions the opportunity to take proactive steps to address the modern threat of terrorism; having met stringent testing requirements to win endorsement by the Home Office, Association of Chief Police Officers, leading banks, and local authorities through its ability to protect people, property and equipment from bomb blasts.

Launched in 2009, Security Blinds Ltd also produces the Anti Ram Raid Gate. This gate is installed behind roller shutters to protect against ram raids. Anchored to the inside of the building the retractable barrier resists being rammed by vehicles, including lorries, and will deter roller shutters from being forced open by jacks or breached by angle grinders used by determined thieves.

**Illuminex Ltd** is a supplier and distributor of intelligent lighting systems. Illuminex solid state systems provide superior performance whilst reducing costs to businesses through reductions in energy consumption and maintenance overhead. This drives a significant reduction of an organisation's impact on the environment through reducing an organisation's carbon footprint, which enables them to seek government funding and loans to implement these solutions.
