

Excellent security against break-ins
 Bomb blast protection
 Protects personnel, property and assets
 Strong aesthetic appeal
 10-year warranty

Far better protection than traditional security bars, grilles and shutters

Secur™ systems are used by police forces all over the UK, which speaks for itself.

Burglars can't get past them. Ram-raiders have failed to penetrate them. And in a remarkably brief period, the Secur™ concept has been recognised and approved by the leading security and security design bodies.

Whatever risks you face, from industrial explosions to burglary; from ram-raiding to terrorism, Secur™ is the solution.

Unlike burglar alarms and CCTV, Secur™ prevents break-ins before they happen. Illegal entry is virtually impossible.

The highest standards

Our products have met with the exacting security standards set by the Home Office and ACPO. Secured by Design, endorsed by ACPO. Sold Secure Gold. Secur™ is the only product of its type to receive the prestigious Gold Award status.

The Blind that's an Impenetrable Steel Barrier

Burglary Protection from Security Blinds

"We needed a balance between security, practicality and aesthetics. Secur™ achieved all 3. We now have attractive secure blinds, which also protect my stock from strong sunlight without leaving us in the dark."

ArtDecoUk

"When Michelin moved to new offices we had recurring problems of theft. On a number of occasions we had been ram raided and our computers had been stolen. We decided upon Secur™ as our best option to resolve the problem. Since having Secur™ installed we have not had any more instances of ram-raiding or even any attempts."

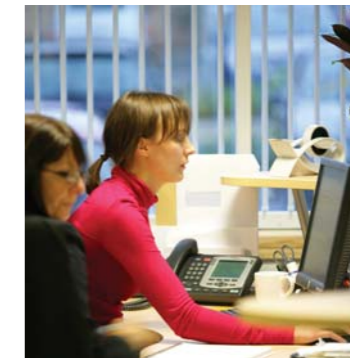

Michelin

"In one of BT's more sensitive locations we have used Secur to replace steel plates over windows and provide the same duty of care. The blinds provide a greatly enhanced work environment, protecting the premises from burglary and the effects of bomb blast"

BT

"HSBC use Secur™ in high risk locations and the product forms part of the HSBC portfolio of physical security solutions where appropriate. Security Blinds consultative approach in preparing solutions complements the method in which HSBC operate."

HSBC Bank plc

Elegant yet robust, Secur™ is a much more attractive and a far more effective barrier than bars and grilles, many of which can be penetrated in minutes. It blends in with any style or period of architecture.

The Secur™ system looks like a conventional vertical blind but tempered steel rods are concealed in each of the distinctive aerofoil-shaped blades. These blades, coupled to a unique, patented locking mechanism, create an impenetrable steel barrier. Otherwise, the blinds have all the benefits that make ordinary ones so appealing. They brighten any building interior; you rotate them to create privacy.

What is more, they are thermally efficient, thus reducing your building's carbon footprint.

One reason why Secur™ has been so well received, especially by the police, is simple. It does much more than just protect property, it can save lives. Secur™ has been tested and proved highly effective in mitigating the effects of bomb blasts and therefore provides a solution to protect personnel and property from terrorist or industrial explosions.

The way Secur™, in conjunction with Anti-Shatter Film, protects is deceptively simple. The second a blast occurs in the vicinity of your

premises, the blades snap shut. This provides an impenetrable barrier, preventing flying glass and debris from penetrating the building.

There can be no compromise about security. Many of the reasons why Secur™ performs so well are literally things you cannot see. To give one example, where others settle for 25mm screws, our blinds are fixed into the window reveal by fixings normally 150mm long.
